Experiment 8: User Management and Role-Based Access Control

Aim:

To create and manage user roles in Zoho Creator and configure role-based access permissions to ensure secure access to library records and application features.

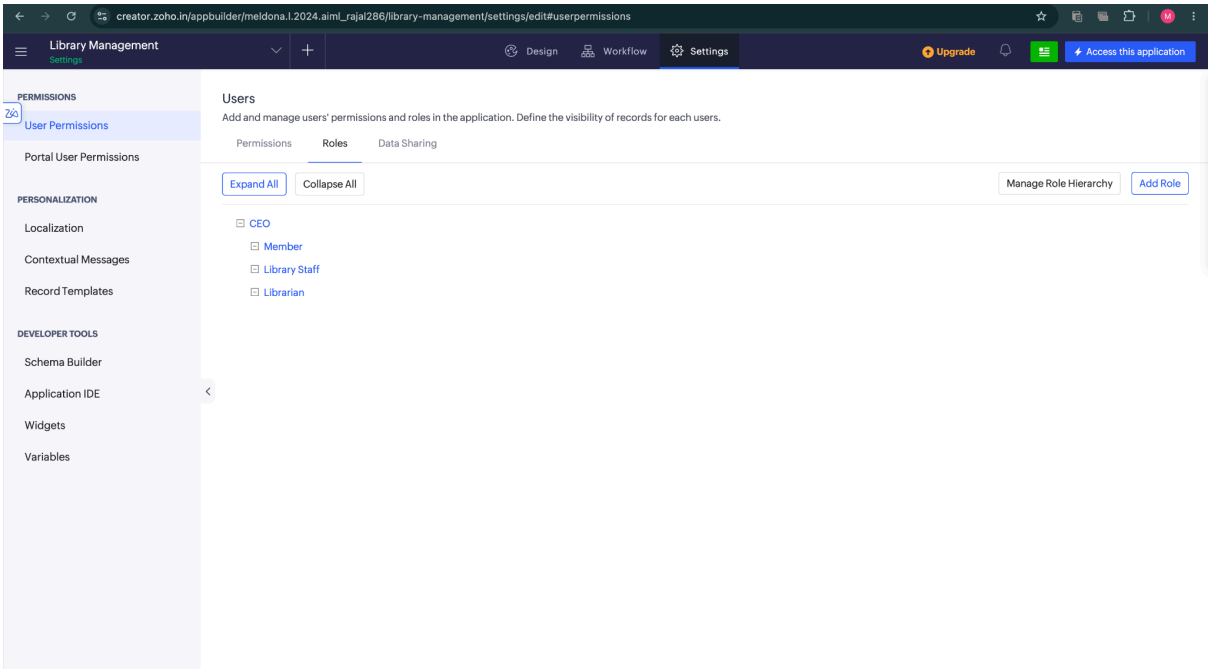

Description:

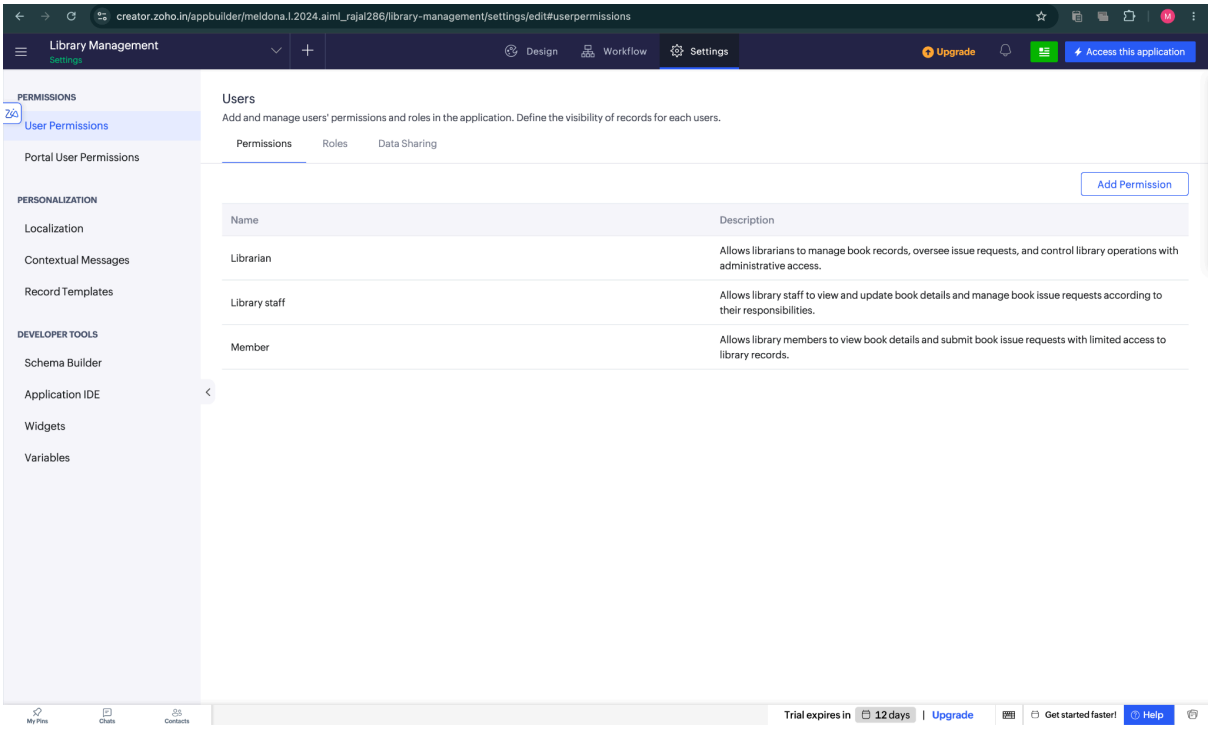

User management and Role-Based Access Control (RBAC) were implemented in the Library Book Issue Management application using Zoho Creator. Three roles, namely Member, Library Staff, and Librarian, were created to assign different levels of access based on their responsibilities.

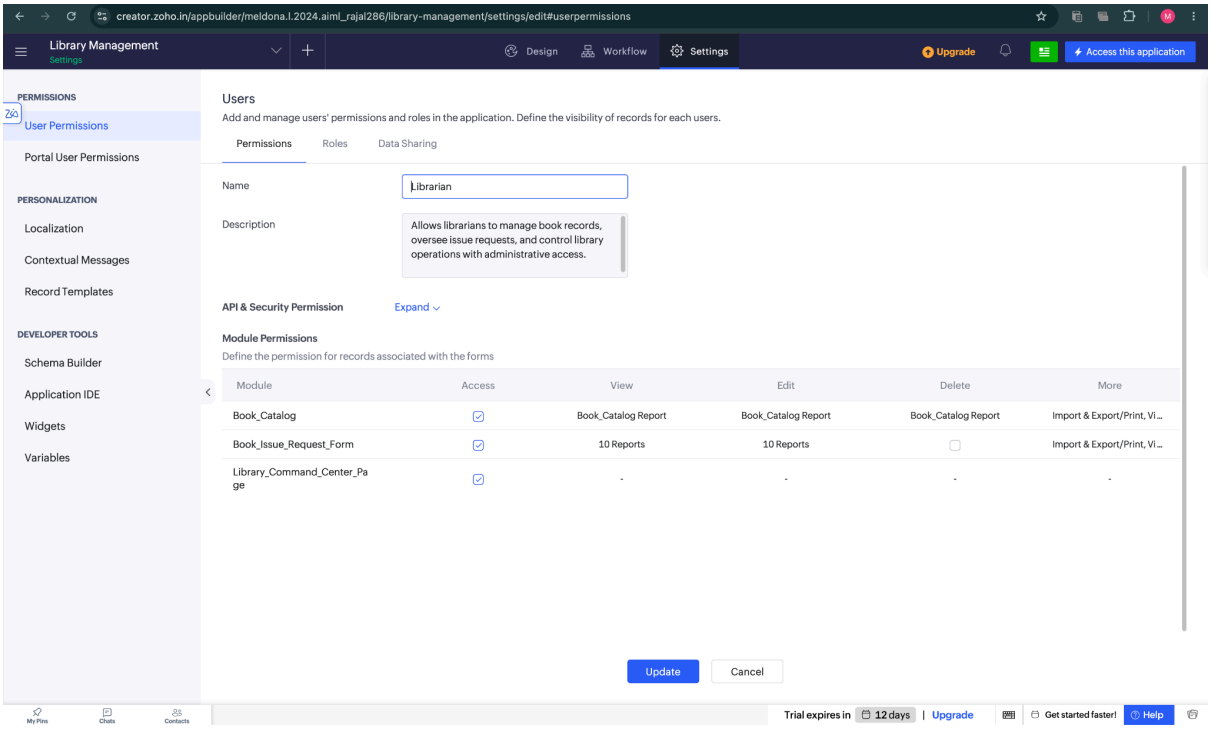

The Member role was configured with limited permissions to view book details and access book issue request features. The Library Staff role was assigned permissions to view and update book information and manage issue requests. The Librarian role was provided with broader permissions to manage book records and supervise library operations.

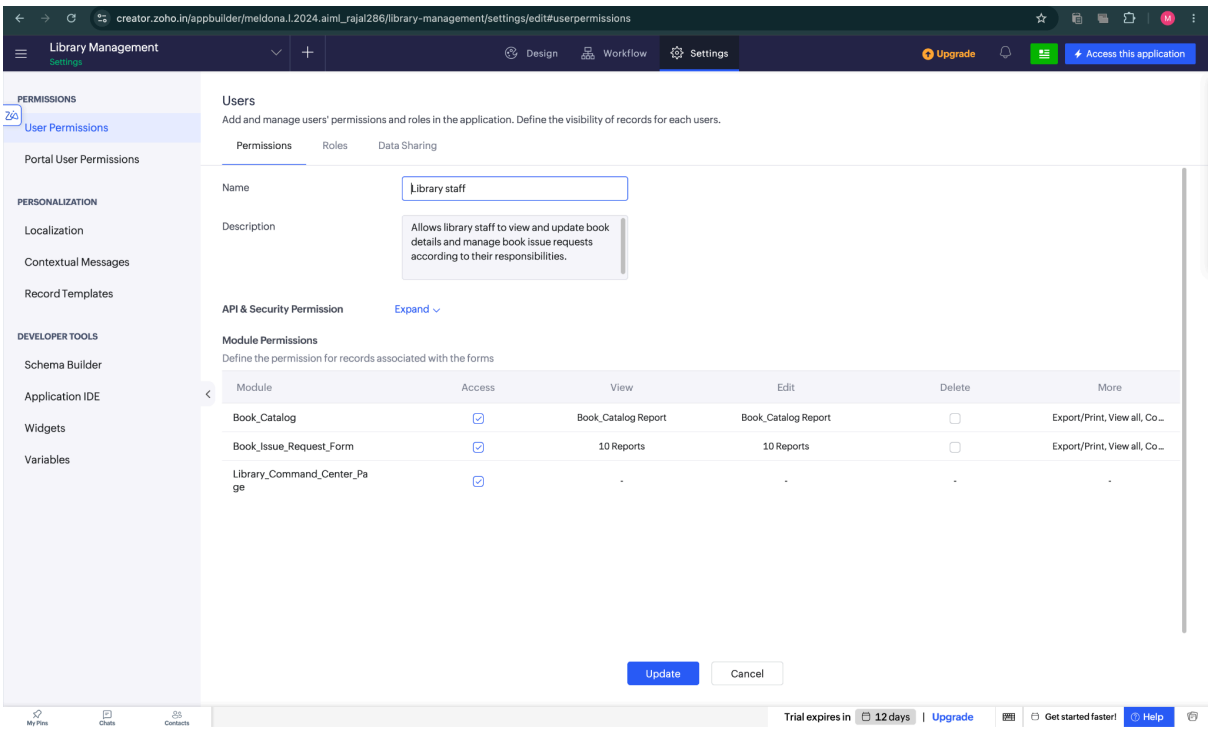

Permissions such as Access, View, Edit, and Delete were configured for the Book Catalog and Book Issue Request Form. Additional settings, including Import, Export/Print, View All, Modify All, Create New Report, Read Comments, and Write Comments, were considered according to the requirements of each role.

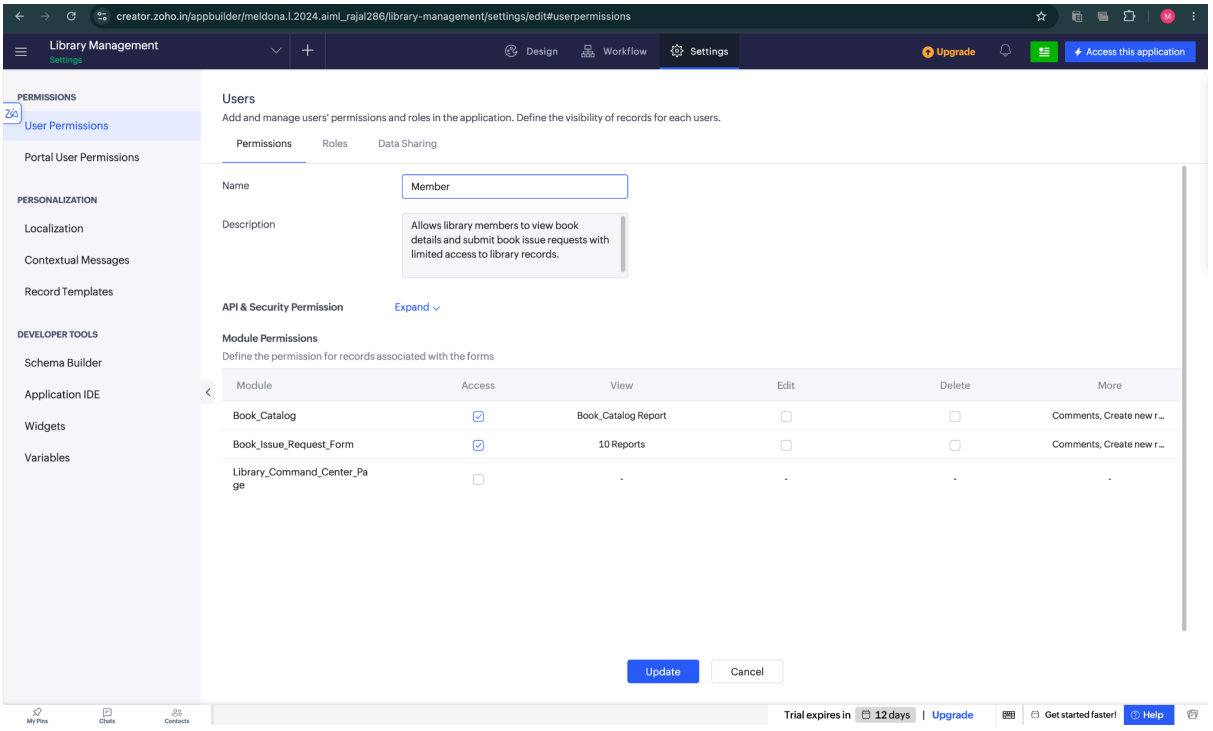

Data-sharing rules were also configured to control access to Book Catalog records between roles. The access settings were tested to verify that users could access the relevant features according to their assigned permissions. This approach helps improve data security, maintain privacy, and prevent unauthorized access to library information.

Result:

User roles, access permissions, and data-sharing rules were configured in Zoho Creator. The application was tested to verify role-based access and provide controlled access to library records and operations.
