EXPERIMENT 7

ZOHO CREATOR API INTEGRATION

AIM:

To integrate an external API with the Library Book Issue Management application in Zoho Creator using Deluge scripting.

SOFTWARE REQUIRED:

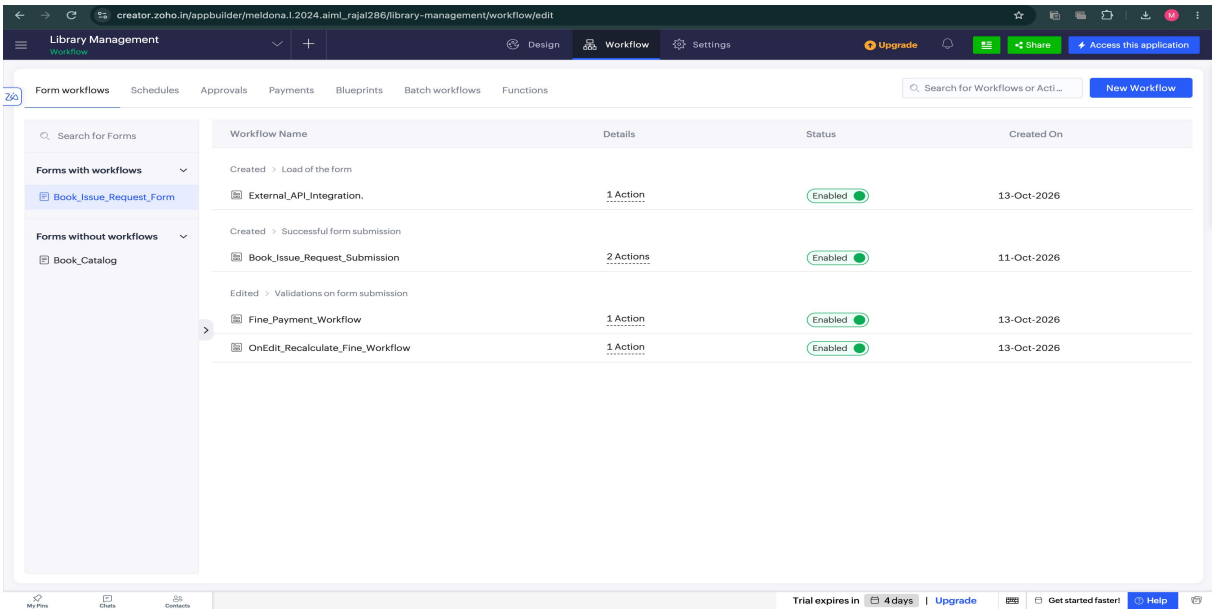

1. Zoho Creator
2. Deluge Script
3. External REST API

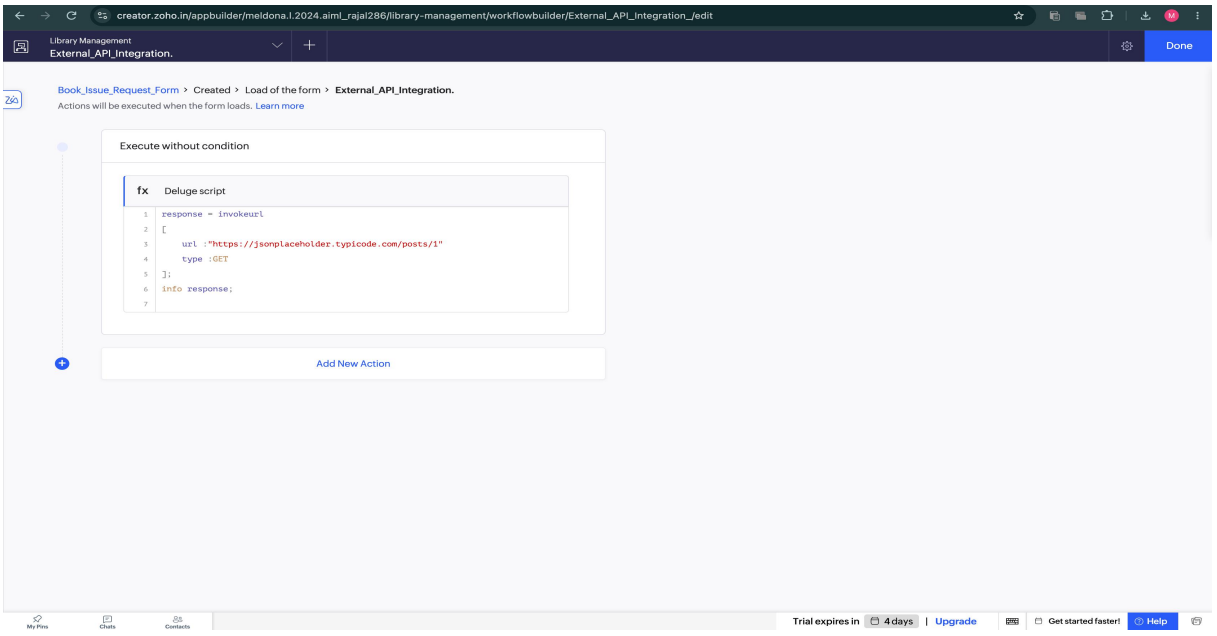

PROCEDURE:

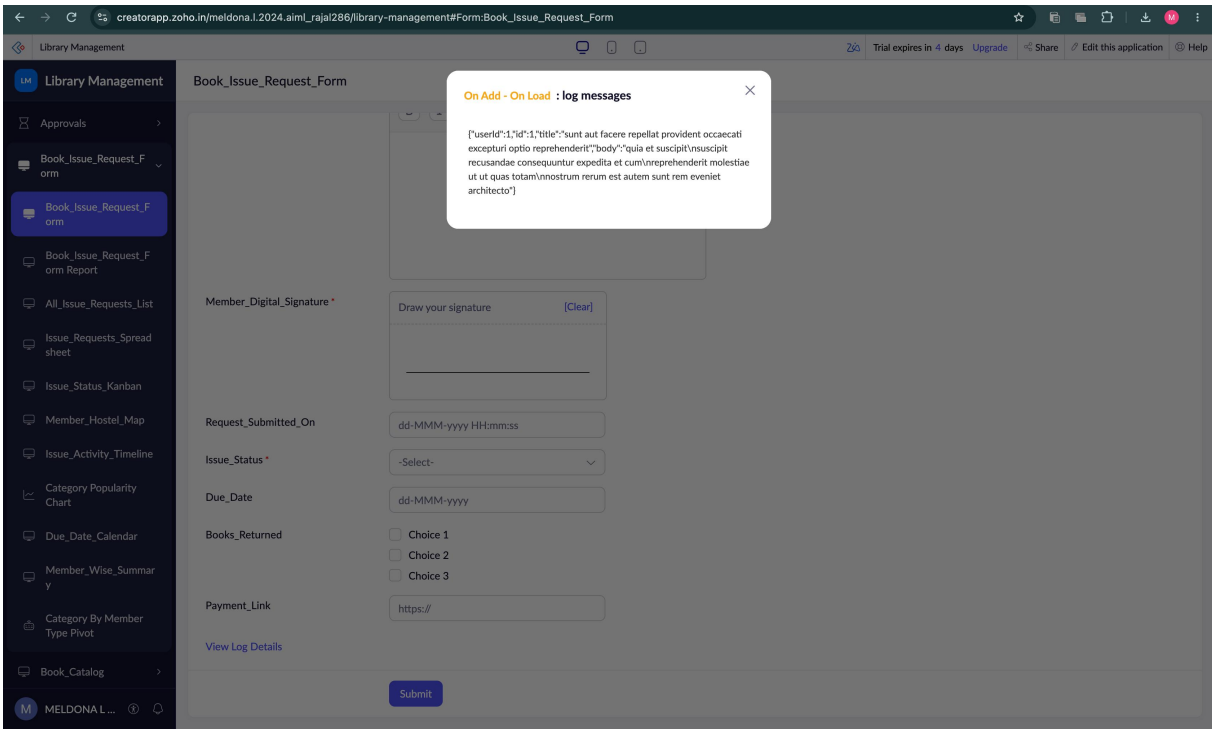

1. Open the existing Library Book Issue Management application in Zoho Creator.
2. Navigate to the Workflows section and create a new workflow named `External_API_Integration`.
3. Select the appropriate form and configure the workflow trigger.
4. Click **Add New Action** and select **Deluge Script**.
5. Enter the following code to connect to an external API:

```
response = invokeurl
[
   url : "https://jsonplaceholder.typicode.com/posts/1"
   type : GET
];
info response;
```

6. The `invokeurl` task sends a GET request to the external API endpoint.
7. The API returns sample data in JSON format, and the `info` statement displays the response in the execution logs.
8. Save the Deluge script and workflow. Trigger the workflow using the configured event and check the execution logs to verify the API response.

Help

RESULT:

An external API call was configured in the Library Book Issue Management application using Zoho Creator and Deluge scripting. Successful execution must be verified through the workflow logs.
