EXPERIMENT 6

LIBRARY BOOK ISSUE AUTOMATION SUITE — WORKFLOW OPTIONS USE CASE

AIM

To create a Library Book Issue Management application using Zoho Creator and implement different workflow automation options for book requests, reminders, approvals, fine payments, overdue notices, and gate pass generation.

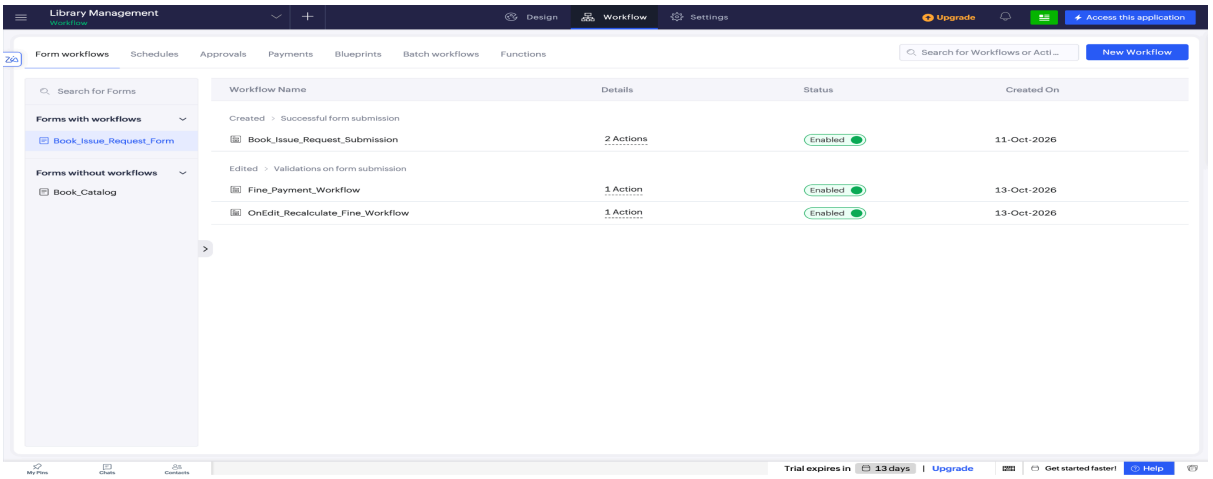

SOFTWARE REQUIRED

1. Zoho Creator
2. Deluge Script
3. Email and PDF Template Features

PROCEDURE

1. Form Submission Workflow

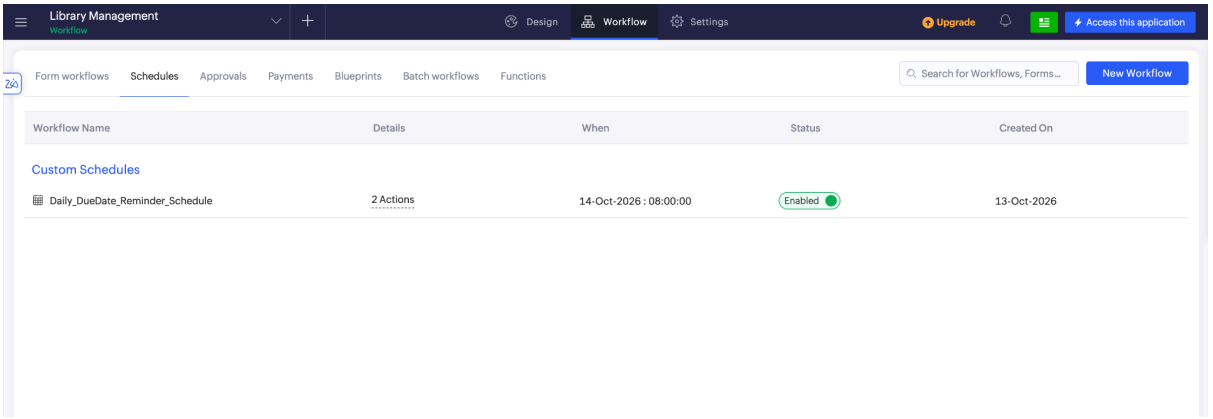

Created a workflow named `Book_Issue_Request_Submission`. When a member submits a book issue request, an email confirmation is sent to the member, and a notification is sent to the library counter staff.

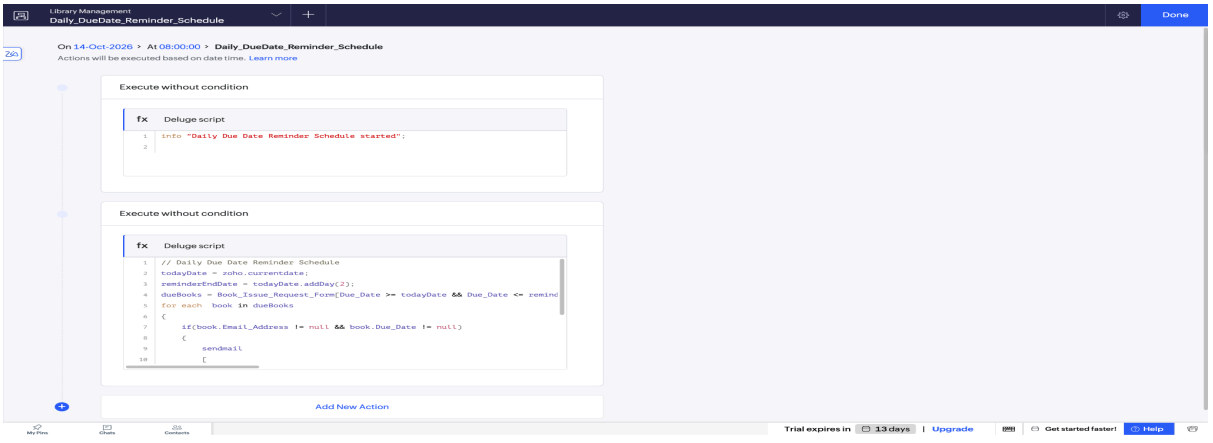

2. Schedule Workflow

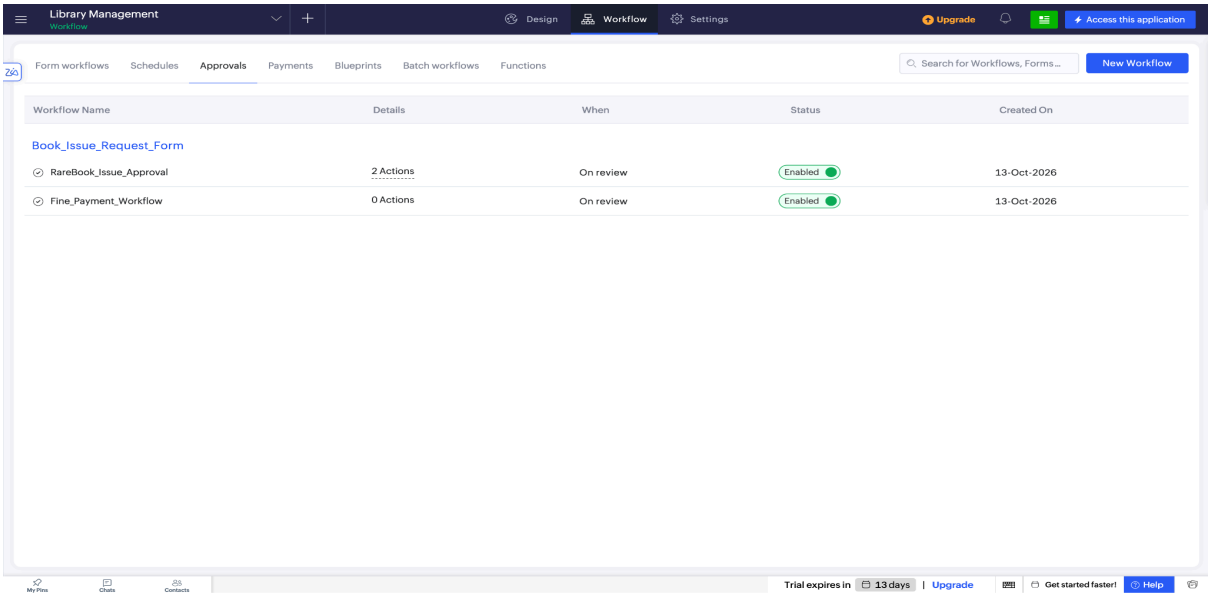

Created `Daily_DueDate_Reminder_Schedule` to run daily at 8:00 AM. It is intended to remind members about books due within the next two days.

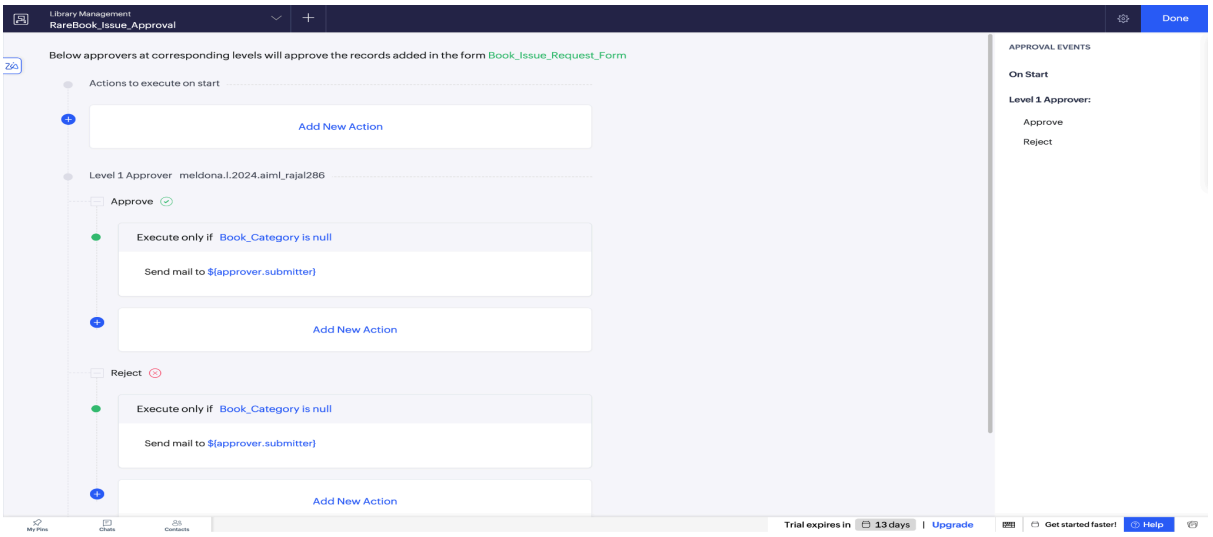

3. Approval Workflow:

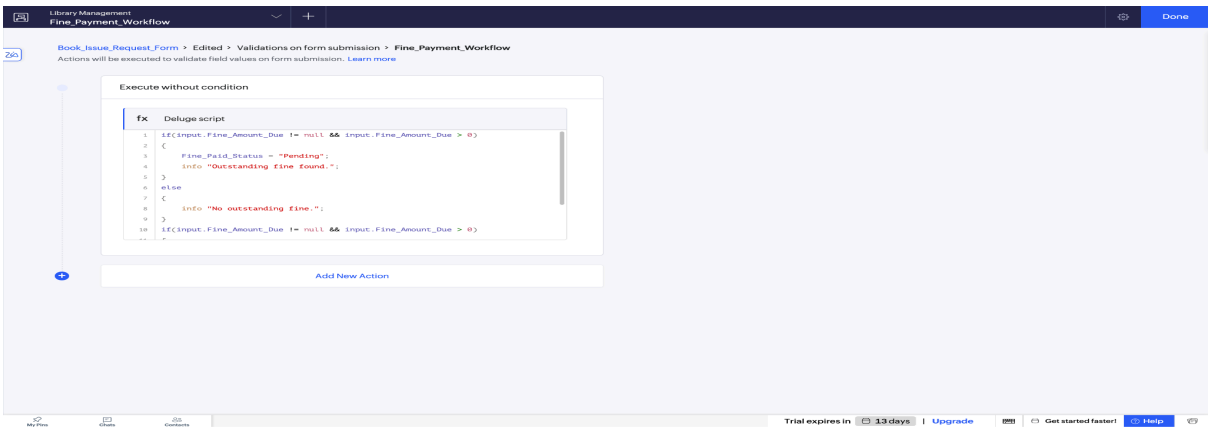

`RareBook_Issue_Approval` for rare book requests. These requests require librarian approval before the book can be issued.

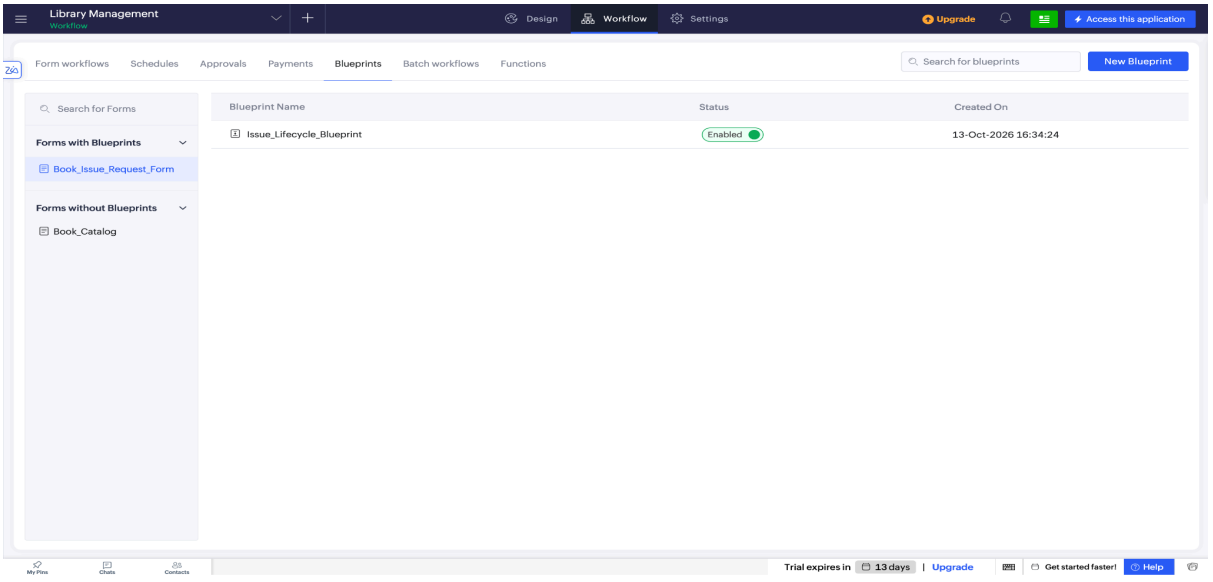

4. Fine Payment Workflow

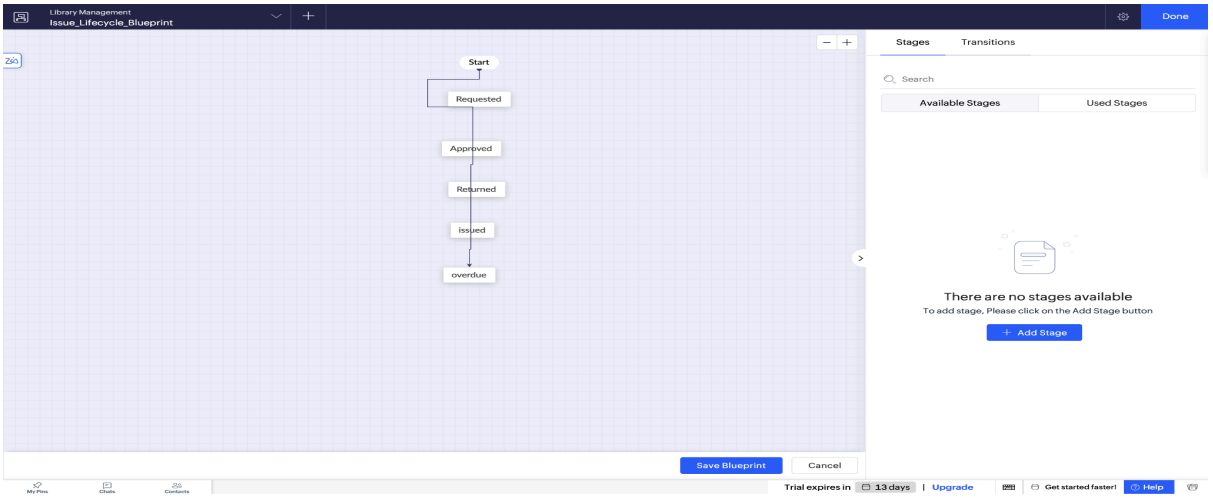

Created `Fine_Payment_Workflow` to handle outstanding fines. The workflow sets the payment status to Pending and provides a test payment link.

5. Blueprint Workflow

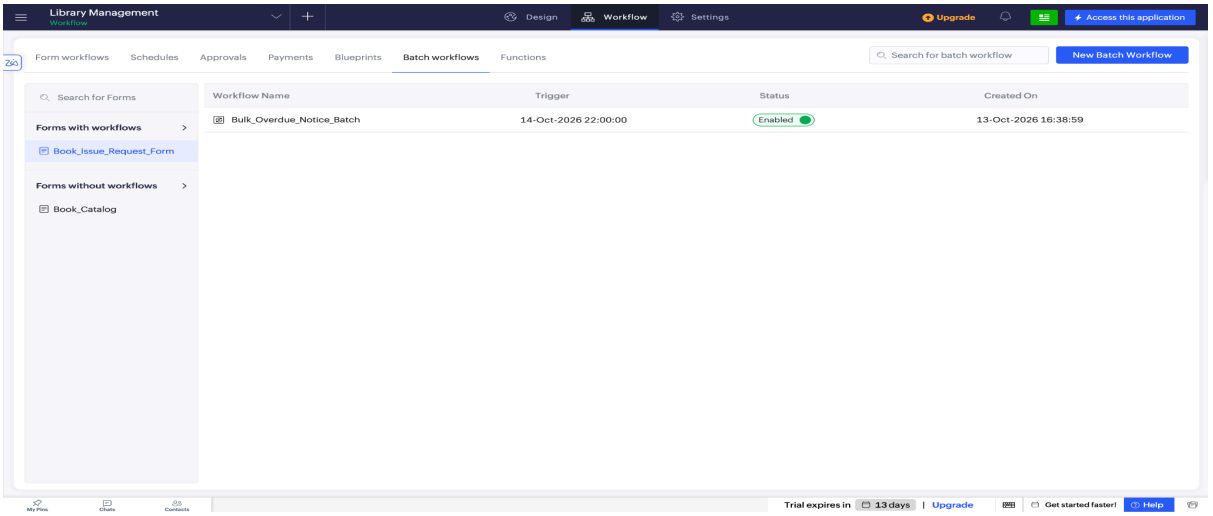

Created `Issue_Lifecycle_Blueprint` with the stages Requested, Approved, Issued, Returned, and Overdue to represent the book issue lifecycle.

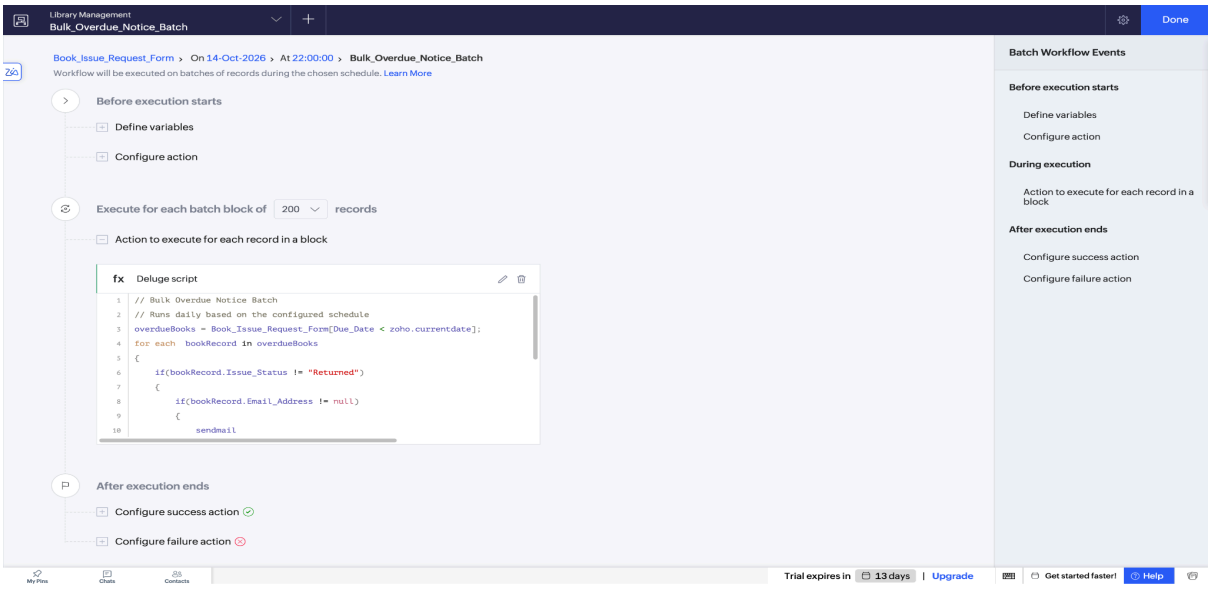

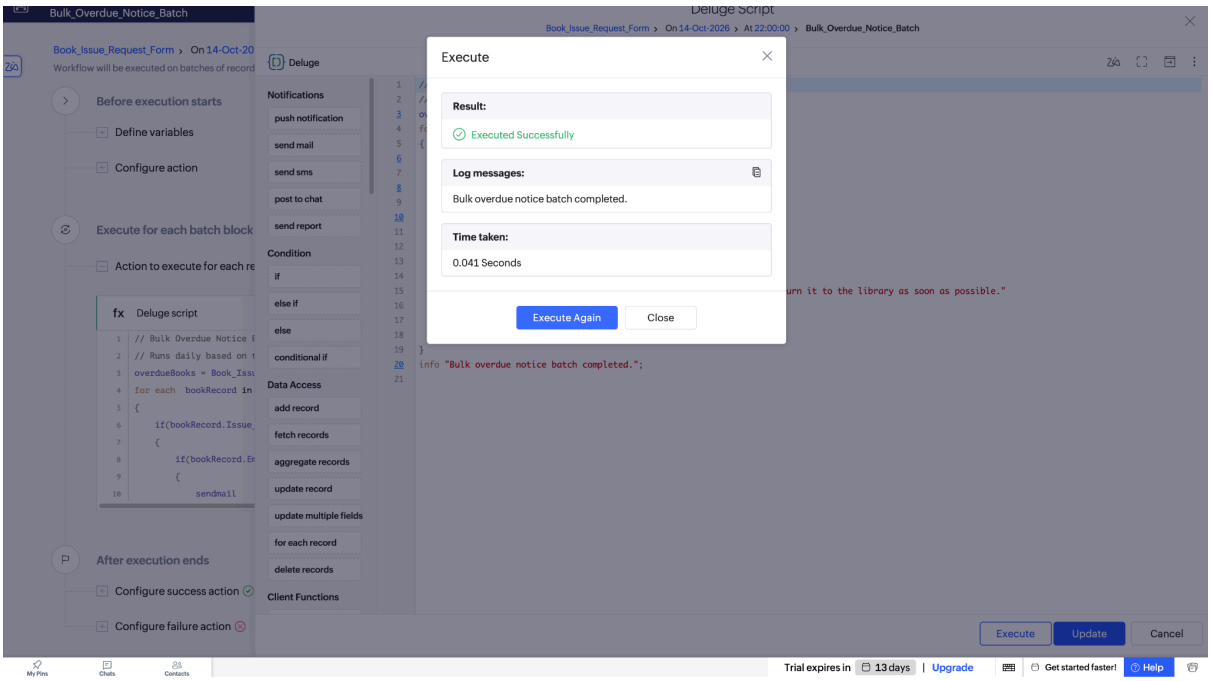

6. Batch Workflow

Created `Bulk_Overdue_Notice_Batch` to schedule overdue notice processing daily at 10:00 PM. The intended batch size is 200 records.

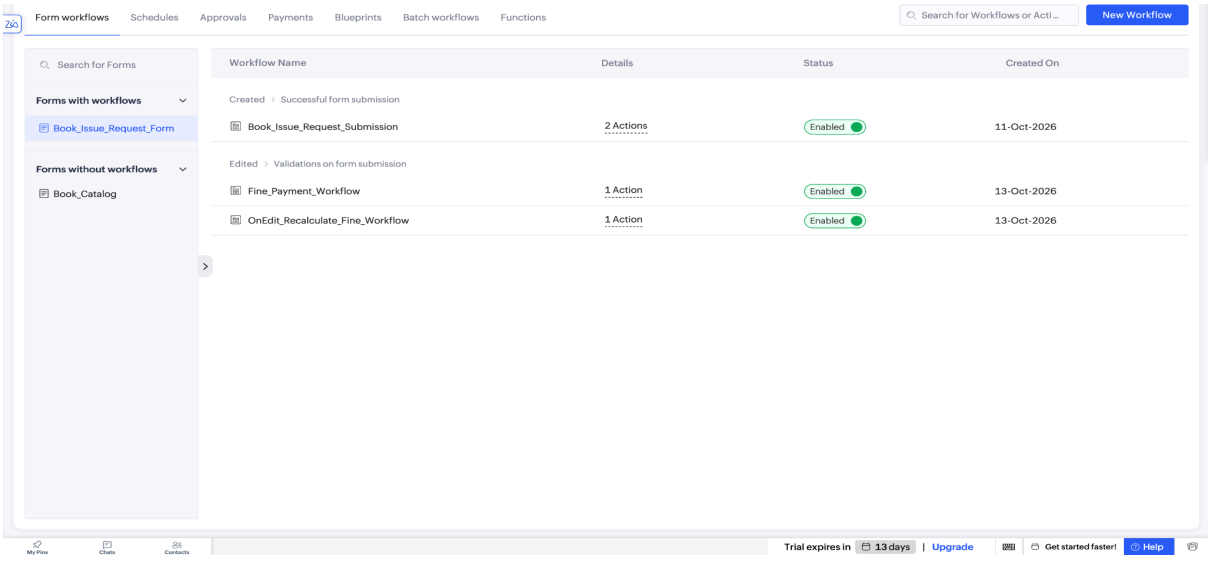

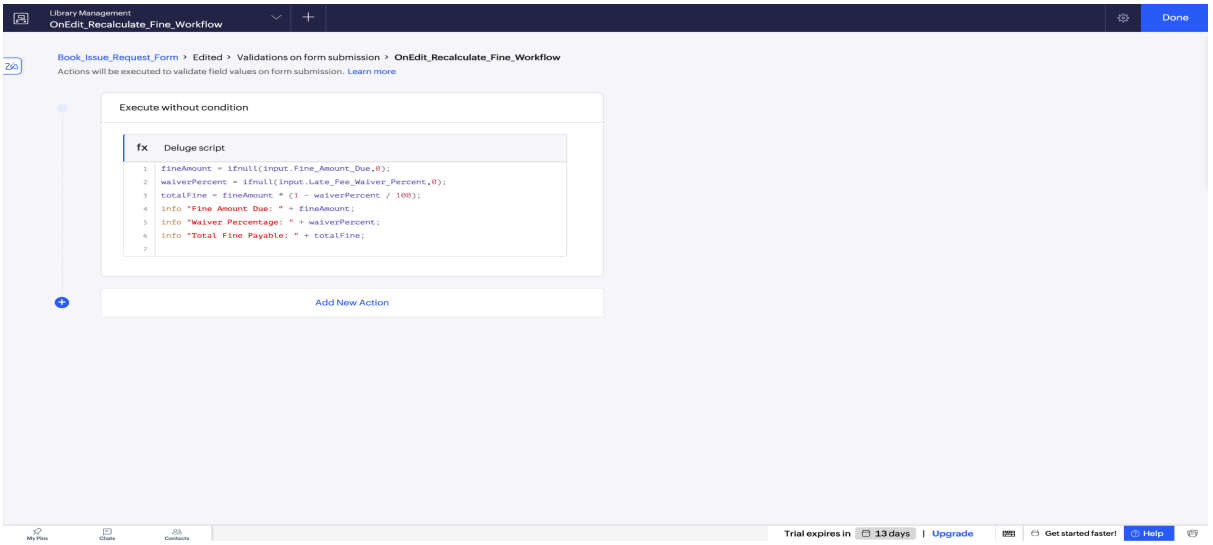

7. Fine Recalculation Workflow

Created `OnEdit_Recalculate_Fine_Workflow` to calculate the payable fine based on the fine amount and late fee waiver percentage.

Formula:

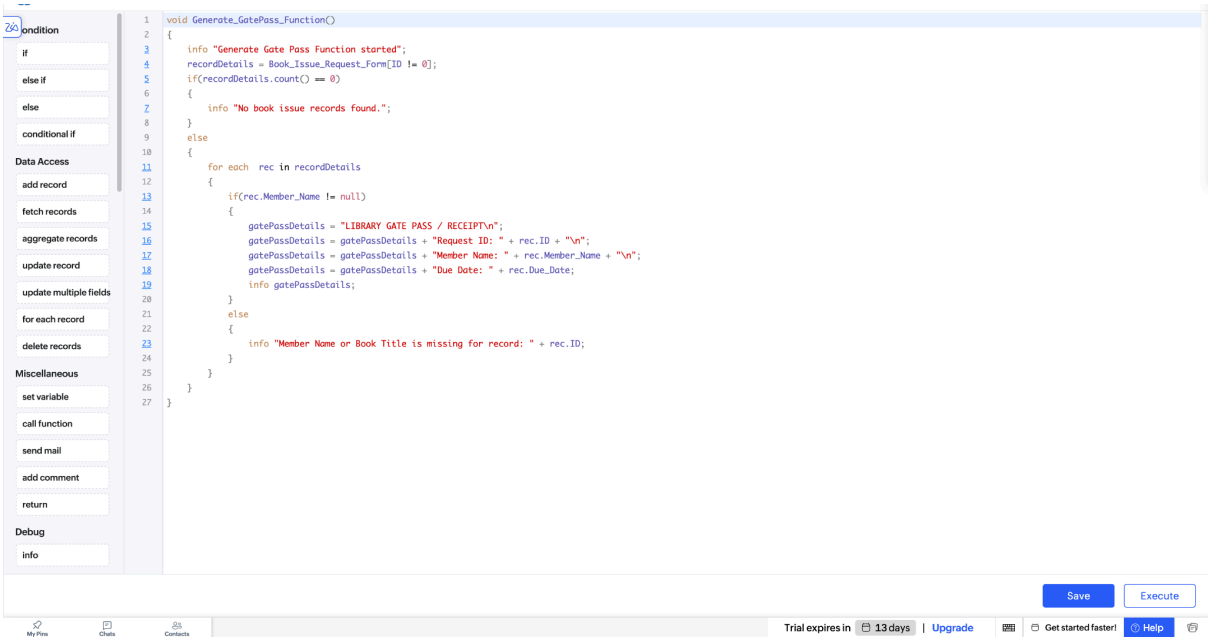

Total Fine Payable = Fine Amount Due × (1 − Waiver Percentage / 100)

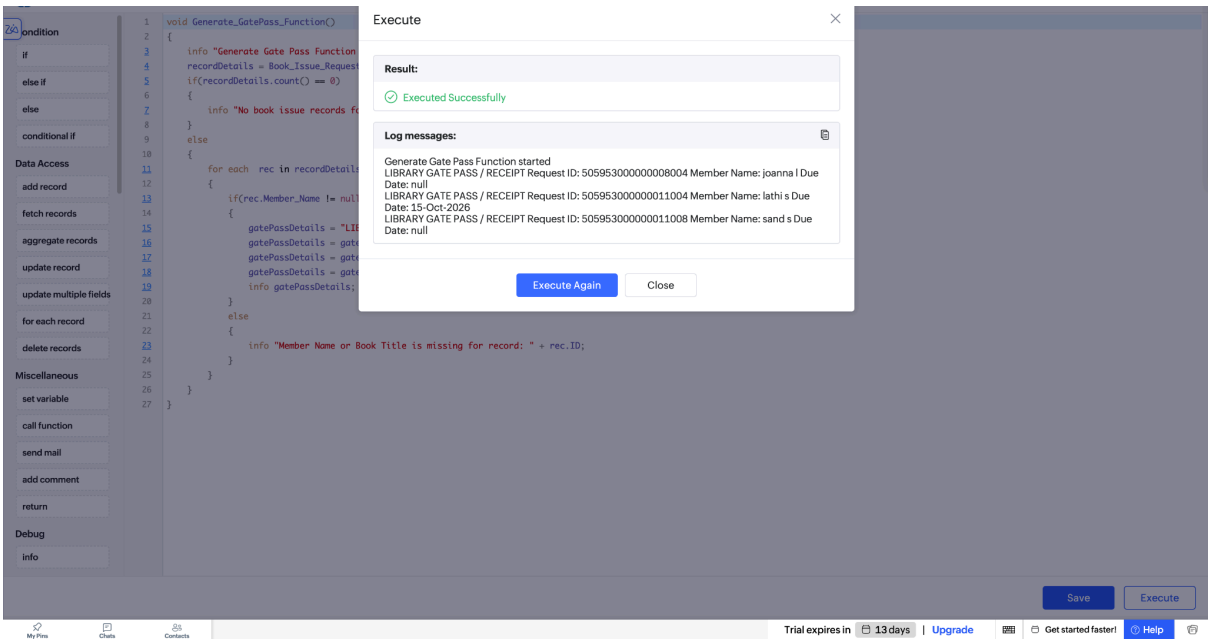

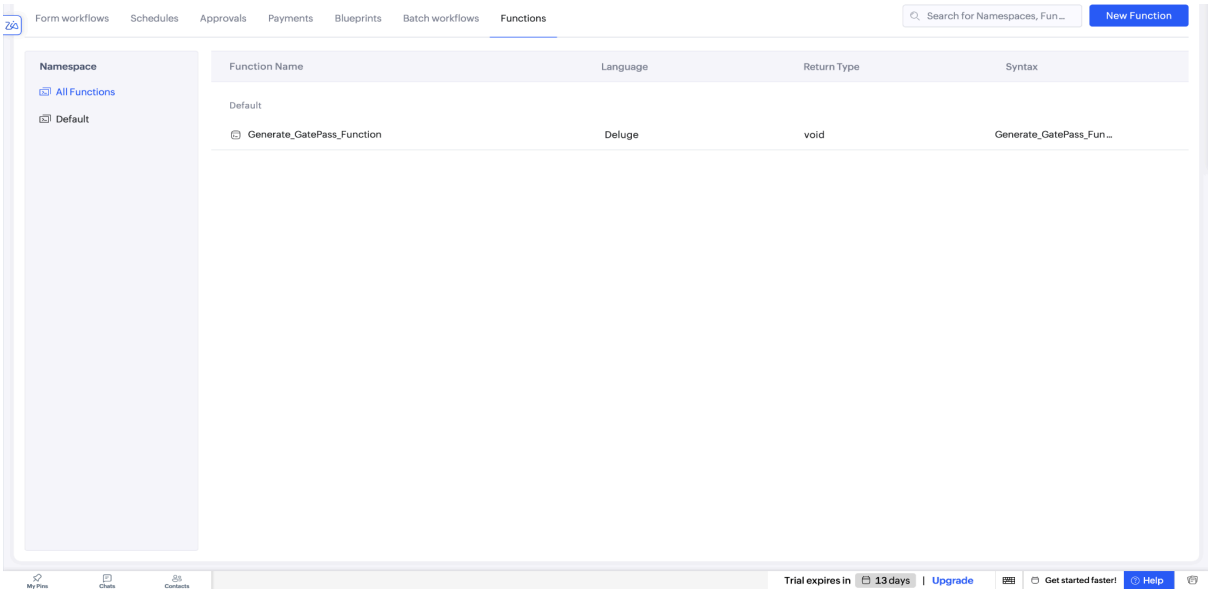

8. Custom Function

Created a function named `Generate_GatePass_Function` using Deluge Script. The function is intended to prepare gate pass details containing the member name, book title, request ID, and due date. PDF generation, email delivery, and workflow integration require additional configuration.

RESULT

The Library Book Issue Automation Suite was created in Zoho Creator with different workflow components for managing library book issue requests. Further configuration and testing are required to verify all automation actions.
